

NAME: JAMES WASHINGTON

COURSE: DATA STRUCTURES

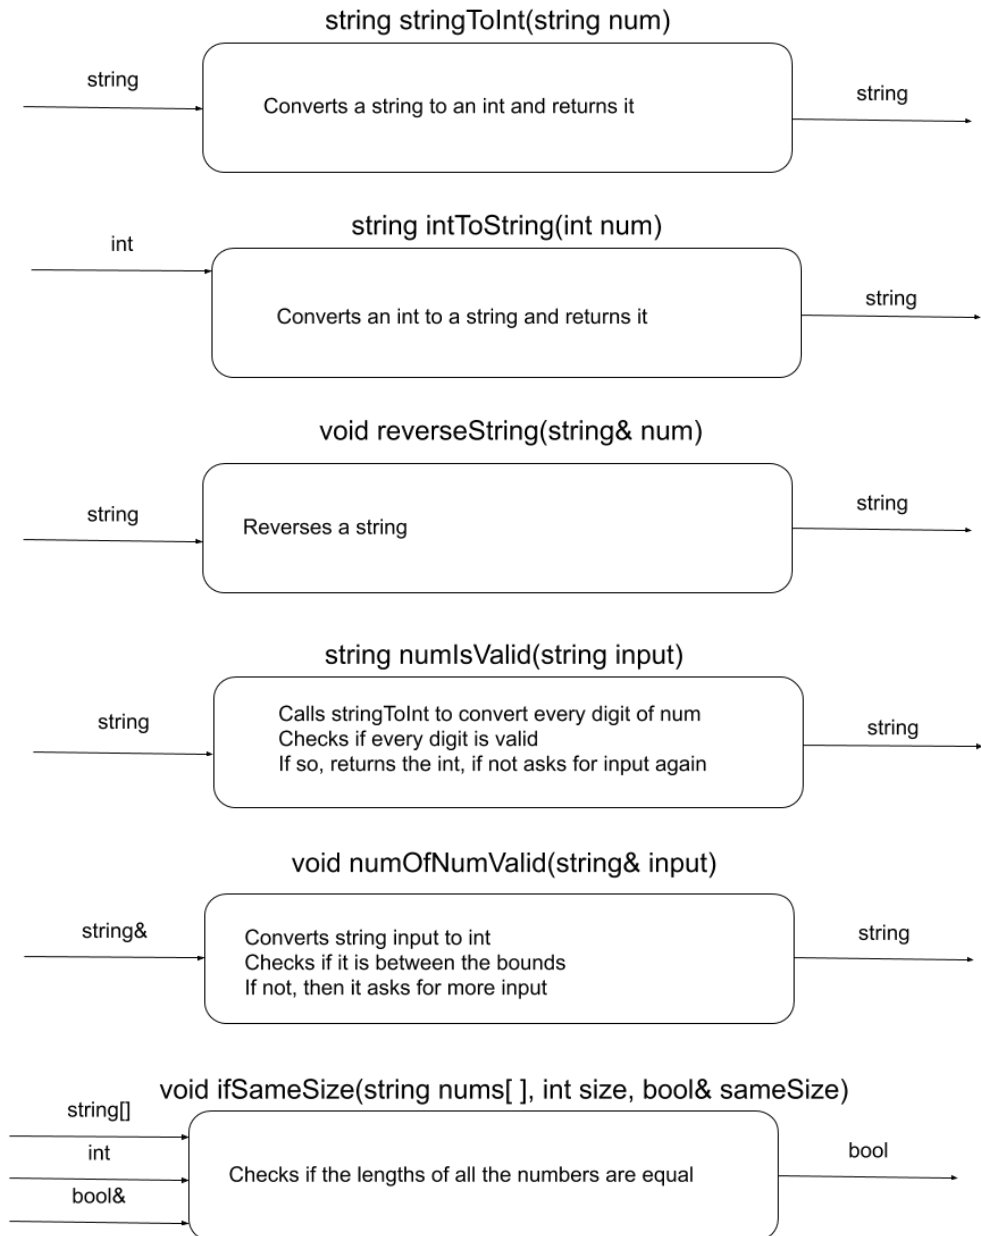

DUE DATE: 2/28/20

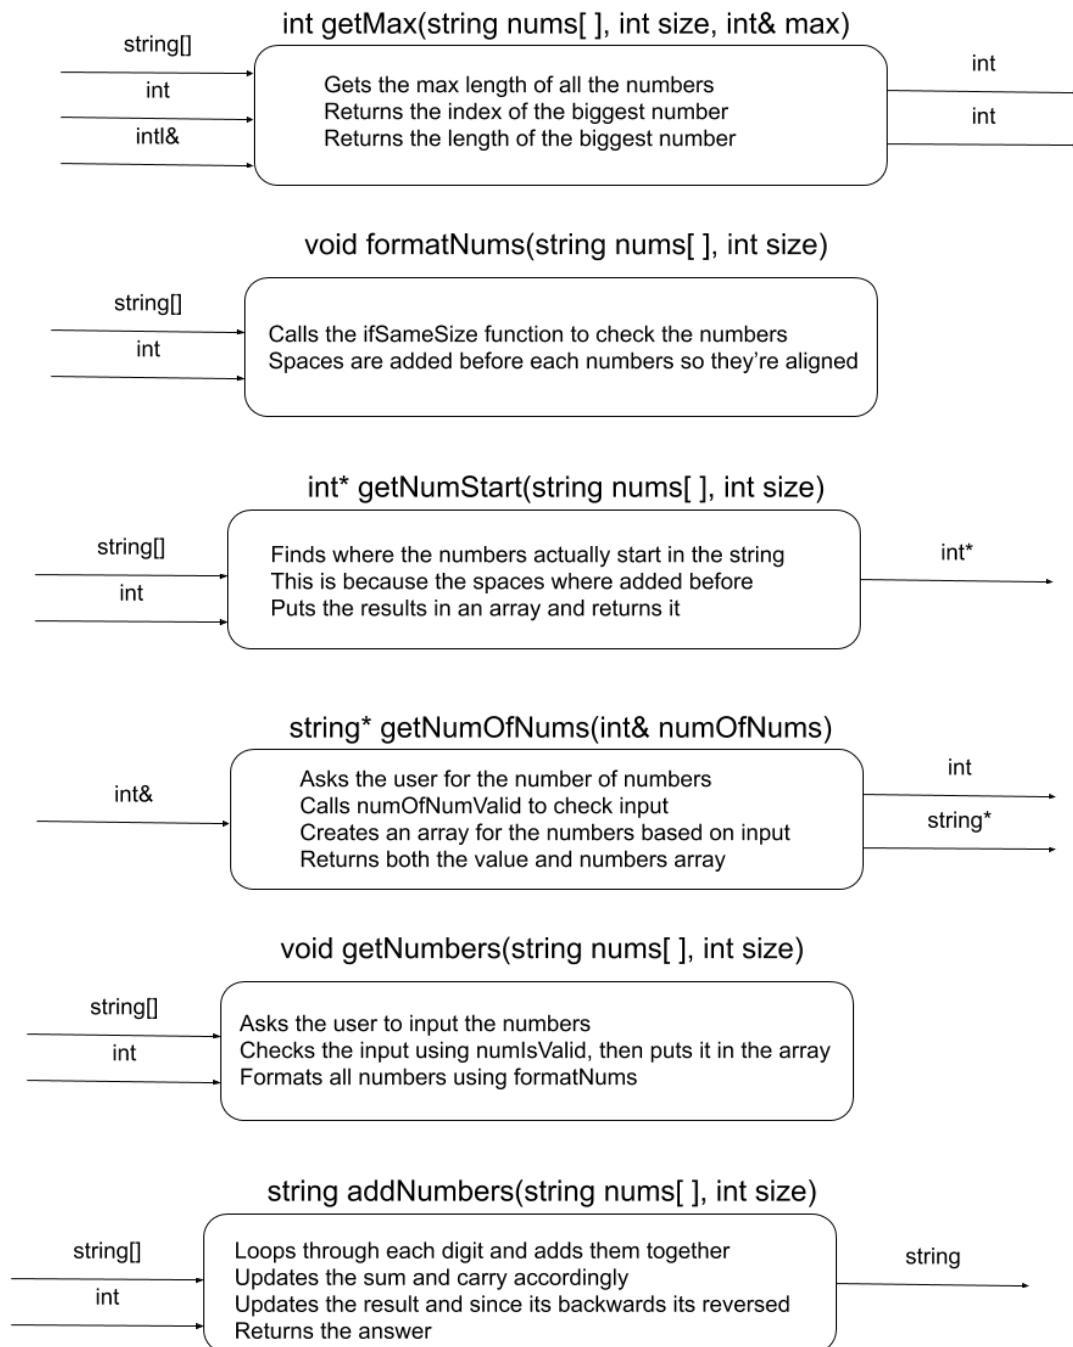

PROFESSOR: DR. NG

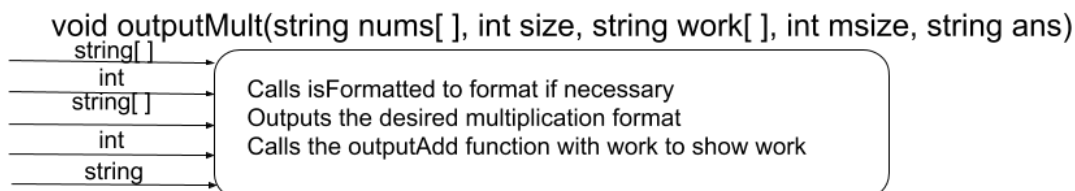

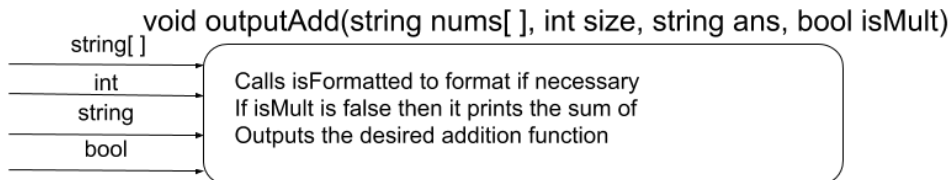

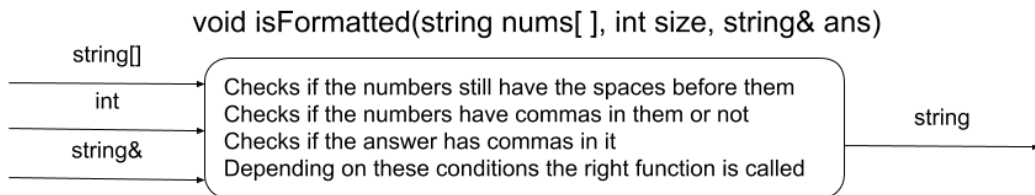

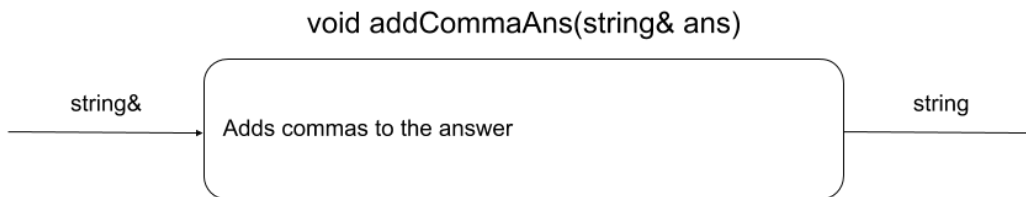

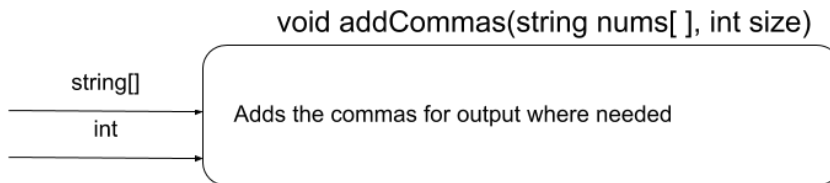

Program Design

Declares an int to hold the number of numbers the user wants
Declares a string variable to hold the result of the addition
Declares a string variable to hold the result of the multiplication
Declares a size variable for the multiplying results array
Declares a string pointer to contain all the numbers
Calls the getNumOfNums function to get the number of numbers the user wants to enter
Calls the getNumbers function to get all the numbers of the array
Calls the addNumbers function to add all the numbers
Calls the multiplyNumbers function to multiply all the numbers in the array
Calls the outputAdd function to output the addition function
Calls the outputMult function to output the multiplication function

Procedure Specification

Program Testing

```
How many numbers >> 9
Enter number 1 >> 123456789
Enter number 2 >> 45234
Enter number 3 >> 345565
Enter number 4 >> 4536232
Enter number 5 >> 453737
Enter number 6 >> 34357
Enter number 7 >> 35467905
Enter number 8 >> 5656
Enter number 9 >> 23454656

The sum of:

  123,456,789
    45,234
    345,565
  4,536,232
    453,737
     34,357
  35,467,905
     5,656
+) 23,454,656
-----
 187,800,131
```

```
The product of:

                123,456,789
*)              23,454,656
-----
 2,469,135,780,000,000
 370,370,367,000,000
 49,382,715,600,000
  6,172,839,450,000
   493,827,156,000
    74,074,073,400
     6,172,839,450
+)              740,740,734
-----
 2,895,636,516,859,584
```

Tested to make sure the output is correct and the numbers are added and multiplied correctly

```
How many numbers >> 12
Invalid input, try again >> 1
Invalid input, try again >> 3
Enter number 1 >> ASDDsfdS
Invalid input, try again >>
Invalid input, try again >>
Invalid input, try again >> safdfghf
Invalid input, try again >> a545641
Invalid input, try again >> 8789
Invalid input, try again >> !@#$%
Invalid input, try again >> )(*&
Invalid input, try again >> 78198s
Invalid input, try again >> 01
Enter number 2 >> 89189654
Enter number 3 >> 564
```

Checks to make sure input validation is working properly

```
The sum of:
      564
89,189,654
+)      1
-----
89,190,219

The product of:
      564
*)      1
-----
+) 564
-----
      564
```

Checks to make sure math is done correctly

```

How many numbers >> 2

Enter number 1 >> 4961516641561651564165165156165

Invalid input, try again >> 456454645

Enter number 2 >> 54564

The sum of:

    456,454,645
+)      54,564
-----
    456,509,209

The product of:

          456,454,645
*)           54,564
-----
 22,822,732,250,000
  1,825,818,580,000
   228,227,322,500
    27,387,278,700
+)      1,825,818,580
-----
24,905,991,249,780

```

Checks input validation again, and make sure math is done correctly
